

TRAX BX D

safety post

The TRAX BX-D safety post is intended for use as an anchoring point to prevent falling from a height for three people at the same time.

It was developed for the purpose of securing people working on flat roofs. It is fixed to wooden structural elements using 12 mm x 120 mm diameter screws. There is a fastening point on the post with a swivel allowing 360° rotation in all directions.

This prevents the formation of loops when the safety line is fastened. Can be used as an intermediate post for fixing horizontal safety systems.

The TRAX BX-D safety post meets the requirements of the standard for anchor devices EN795, class A/C and CEN / TS 16415.

Specification

Material	INOX
Weight	4 kg
Size	300-1000 mm
Users	3
Standard	EN 795 A,C CEN/TS 16415
Warranty	12 months

Mounting substrates

Wooden structural elements
