

# TWIST FIX

safety post

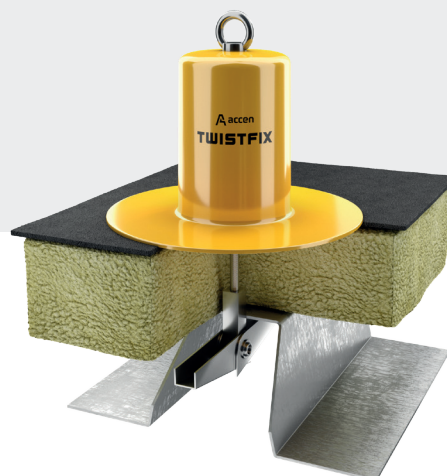

**TWIST FIX is intended to be used as an anchoring point to prevent falls from a height for two people at the same time.**

It is designed for mounting on flat roofs with thermal insulation. It is installed through the roof insulation using a special anchor for structural elements such as trapezoidal sheet, reinforced concrete, hollow core slabs.

The resulting dynamic forces in the event of a fall shall be absorbed and minimised by an internal absorber. The inside of the post is filled with insulating material, which eliminates thermal bridges.

The base of the post is sealed with the material of which the roofing is made, e.g. PVC, EPDM, bitumen. Designed to protect two people at the same time.

Meets the requirements for anchoring devices in accordance with EN 795 A: 2012 and has been tested and certified by SATRA European Notified Body no. 0321.

## Specification

Material	ALUMINIUM
Weight	0,3 kg
Size	260-120 mm
Users	2
Standard	EN 795 A, CEN/TS 16415
Warranty	12 months

## Mounting substrates

Structural elements trapezoidal sheet / reinforced concrete / hollow core slabs	with thermal insulation
